

## Reduce phantom loads in your home.

### TrickleStar Tricklestrip™

7005.602 — \$24.95

This powerstrip not only safeguards your equipment from damaging power surges, it helps lower your electric bill. This 6 outlet model offers 2 always-on outlets, 1 master outlet, and 3 controlled outlets. The master outlet has 2 selectable switches to sense when the control device (typically a television or computer) is on or off, and it then switches the controlled outlets on or off accordingly to prevent unnecessary power use, eliminating phantom loads.

### APC® 8-Outlet Power-Saving SurgeArrest

7005.115 — \$25.30

The Power-Saving SurgeArrest not only safeguards your equipment from damaging power surges or spikes, it also helps lower your electric bill. "Master/ Controlled" outlets are designed to detect when your computer is asleep, then automatically powers "off" connected peripherals to prevent wasteful power consumption.

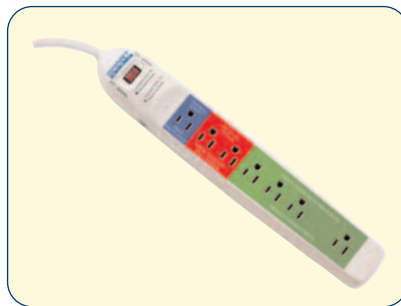

### Smart Strip Power Strip

10 outlet: 7005.148 — \$39.95  
7 outlet: 7005.149 — \$29.95

The Smart Strip Power Strip works to switch your devices on and off automatically, helping you to save money on your electric bills.

When you shut down your computer, or the computer goes into sleep mode, all of the peripherals (printer, monitor, etc.) will also turn off. When you turn on your computer, the peripherals will all turn back on automatically.

## Phantom Loads

### These helpful tips can reduce phantom loads throughout your home:

- Plug home electronics such as TVs and DVD players into power strips, turn the power strips off when the equipment is not in use. (TVs and video equipment in standby mode still use several watts of power.)
- Use a power saving power strip that detects when your computer is asleep (or when there has been no motion near the computer), then automatically powers off connected peripherals.
- Unplug appliances such as toasters, microwaves, coffee makers, etc. when not in use.

**Isole IDP-305  
Plug Control**

7005.143 — **\$90.00**

The outlets in this power strip work together, automatically turning all controlled devices on when motion is detected in front of the remote, and off when the workspace has not been occupied for a period of time. It contains six outlets controlled by motion and two outlets that are uncontrolled, which remain on regardless of occupancy.

This power strip also provides surge suppression, protecting connected equipment against threats like power surges, lightning strikes and voltage spikes.

**Kill A Watt  
Electricity Monitor**

5020.402 — **\$20.00**

Find out which appliances are the energy abusers in your house. Plug this device into a wall outlet, plug your appliance, computer, or other electrical product into the Kill A Watt Electricity Monitor, and you will be able to monitor the kilowatt consumption of an item to learn how much it costs to run by day, week, or month.

**Intermatic  
Mechanical Timer**

5010.152 — **\$43.00**

This heavy duty 24 hour mechanical time switch has a lockable tamper-proof all-metal electrostatically painted enclosure and heavy duty gear mechanism for reliable operation. It is suitable for use with electric water heaters, outdoor lighting, and to control pools, spas, and fountain pumps.

**Are there phantoms lurking in your home?**

Home electronics are responsible for approximately 9% of household electricity use. Many of these products continue to draw a small amount of power even when they are in standby/off power mode. These “phantom” loads occur in products such as DVD/VCRs, televisions, stereos, computers and kitchen appliances.

Check out the Energy Thieves calculator at [txu.com/energythieves](http://txu.com/energythieves) to help you figure out the “phantom” power use in your home.

Appliance in OFF MODE	Watts Consumption	Annual Electricity Cost
 <b>Computer/Monitor</b>	3.97	\$4.64
 <b>Laptop</b>	8.9	\$10.41
 <b>TV</b>	2.88	\$3.36
 <b>DVD Player</b>	5.04	\$5.90
 <b>Game Console</b>	1.01	\$1.18
 <b>Microwave Oven</b> <i>Assumes 13¢ kWh</i>	3.08	\$3.60
